### **Envelope replaces sterilization**

*"Envelope Kidney," a disposable, presterilized artificial kidney may soon replace those which require many hours of sterilization before home dialysis.*

*Developed by Yukihiro Nose, MD, and associates from the Cleveland Clinic Foundation, the kidney has already passed extensive clinical trials and will make it possible to reduce blood-cleansing time.*

*The envelope kidney was produced with the aid of the Artificial Kidney Program of the National Institute of Arthritis and Metabolic Diseases, National Institute of Health. It is a sealed sandwich of a special type of cellophane supported externally by a fiber screen. Blood ports for attachments to the patient's circulation are included within each sealed package.*
